

Greer Finishing Capability Grows "Exponentially"

Installation of I²S
finish mill gives
customers quality
that shines.

The third finishing mill in Greer Steel's ongoing improvement program will be up and running by June, 2004.

Provided by I'S, the global leader in mill equipment, the new mill will increase Greer's temper capacity by 3,000 tons/month and will allow better utilization of the finish rolls and greater diversity of roll finish. The mill will be housed in a new building being constructed in Dover.

Some specs of interest:

- Material:** All carbons— C1006 to 1095
- Gauge:** Up to .220" finished
- Finishes:** #1 Matte, #2 Regular Bright, #2 Lite Brite,
#2 Best Bright, #3 Best Bright
- Widths:** 8" – 20"

Improved finish, higher quality and greater consistency are some of the benefits you can expect as a result of this and other Greer improvement projects. For additional details, please call us. Let us demonstrate how we can reduce your cost, improve your yields and increase your bottom line through these projects.
