In keeping with Greer's commitment to continuous improvement, shorter lead times and faster delivery, we have made extensive upgrades to the dual-head, 18" slitler at our Ferndale location. The improvements and resulting benefits are as follows:

Entry coil rotary storage unit — Eliminates coil damage, improves productivity and boosts product quality.

A new pad-type tension stand — Allows for rapid disconnect of tension pads for quick interchange.

New passline rolls — Reduce reverse coil set and crossbow for improved uniformity.

Added 33' deep looping pit — Improves coil quality, increases productivity with Sonar Loop Control.

Other improvements include additional tooling bar assemblies, a recoiler that can handle 10,000 pound coils, and an upgrade to the uncoiler.

If you would like more information on how you will benefit from these improvements, please call us.

John R. Raese
President, Greer Steel Co.
